--- FUNCTION: STABILIZES TBP BINDING TO AN ARCHAEAL BOX-A PRO ALSO RESPONSIBLE FOR RECRUITING RNA POLYMERASE II TO THE INITIATION COMPLEX (DNA-TBP-TFILB) (BY SIMILARITY).
--- COFACTOR: BINDS 1 zinc ion per subunit (By similarity).
--- SIMILARITY: BELONGS TO THE TFILB FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      INITIATION COMPLEX (DNA-TBP-TFIIB) (BY SIMILARITY).                                                        The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase chain reaction (PCR) primers, oligomers, and for chromosome can gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving abbrrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in dispnostics for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human consequence data for this patent did not appear in the printed sequence of the trains of the product of the printed consequence data for this patent did not appear in the printed sequence.

                                                                                                                                                                                                                                   The present invention relates to methods of detecting a prostate cancer-associated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancer-associated polynucleotides (designated by Genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancer-associated polynucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful. for diagnosing and treating prostate cancer in mammals. The prostate cancer, as well as for identifying modulators of prostate cancer, as well as for identifying modulators of prostate cancer, as well as for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               diagnostic, forensic, gene therapy and chromosome mapping procedures
Detecting a prostate cancer-associated transcript in a cell in a patient, useful for diagnosing prostate cancer (PC) or screening modulators of PC, by determining if prostate cancer-associated genes are expressed in a prostate tissue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       prostate cancer. The nucleic acid sequences are particularly useful in gene therapy, as a vaccine or in antisense applications. ABG61800-ABG61944 represent prostate cancer-associated proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for

The present sequence is a polypeptide encoded by one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30' different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed CDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. S ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.

New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures

Claim 13; SEQ ID 4840; 71pp + CD-ROM; English.

The present sequence is a polypeptide encoded by one of a large number of 5 ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs different total human RNAs or polyA+ KNAs derived from 30 different Lissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the MRNA because they are often obtained from oligo-dr primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are entractived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and

The Inventions and other carcinoma in a subject, or identifying an individual to be segregated from a high risk environment. The method comprises contacting an RPL14, CD39L3, pMGM, or GC20 gene probe with a comprises contacting an RPL14, CD39L3, pMGM, or GC20 gene probe with a comprises contacting an RPL14, CD39L3, pMGM, or GC20 gene probe with a sample obtained from a subject, and analysing DNA from the test sample obtained from a subject, and analysing DNA from the test sample. The method is useful for identifying a subject (a smoker, non-smoker or former smoker) at risk for the development, recurrence, or metastasis of cancer (preferably cancer of lung, bladder, head, neck, urothelial, kidney, pancreas, mouth, throat, pharynx, larynx or esophagus, or an upper airway primary or secondary cancer), to identify subjects who need an intensive follow up protocol and for the prognosis and diagnosis of cancer. This is the amino acid sequence of the human ribosomal L14 protein (RPL14, located on chromosome 3p21.3), used to develop the gene probe described in the method of the invention. The invention describes a method of identifying a subject at risk for the

AAF71138 to AAF71357 encode the Corynebacterium glutamicum homeostasis and adaptation (HA) proteins given in AAB79023 to AAB79242. The c. glutamicum HA genes (I) can be used in vectors for expression in host of cells and production of fine chemicals, such as, an organic acid, proteinogenic or nonproteinogenic amino acid (preferred), purine or pyrimidine base, nucleoside, uncleotide, lipid, saturated or unsaturated fatty acid, diol, carbohydrate, aromatic compound, vitamin, cofactor, polyketide or enzyme. The amino acids produced can be lysine, glutamine, glutamine, apartate, glycine, serine, threonine, methionine, cysteine, valine, leucine, isoleucine, serine, threonine, platianine, cysteine, valine, leucine, isoleucine, serine, production can be modulated. The presence of (I) or HA proteins encoded by then are used for diagnosing the presence of (I) or HA proteins encoded by then are used for diagnosing the presence or activity of Corynebacterium diphtheriae. (I) can be used to map the C. glutamicum genome or can be nevaluated as markers for genetically engineered Corynebacterium. The HA proteins encoded by the (I) are used to maintain be nevaluated:

Description of the proteins encoded by the (I) are used to maintain to significant to adapt to maintain to a maintain t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, 5' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is a polypeptide encoded by one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;

The present sequence is from the p28 antigen. Antibodies specific for the nuclear prollieration associated p24 and p28 antigens do not cross-react with cytoplasmic material or with nuclei from non-proliferating cells. Such antibodies, their fragments and conjugates are useful as markers for determining the prollferative activity of cells, especially as ELISA reagents for prognosis of mammary carcinoma or malignant lymphoma, for assessing endometrial cycle status, for distinguishing between benign
from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, foresnsic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human cell proliferation; tumour; antigen; mammary carcinoma;
diagnos1s; prognos1s; proliferative activity; malignant lymphoma;
endometrial cycle status; antigen-stimulated lymphocyte proliferation.

Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer associated proteins represented in AAB58106 - AAB58548. Lung cancer associated proteins and polynucleotide sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; antagonists may have neuroprotective; cytostatic; cardioactive; and munoumodulatory; muscular active general; vulnerary; gastrointestinal general; nephrotropic; antiinfective; gynecological; or antibacterial activity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer, chromosome identification, as chromosome markers, and for numerous other disorders such as neural, immune, muscular, reproductive, cliscutestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases. Polynucleotide sequences AAF1845 - AAF18433 and infectious diseases. Polynucleotide sequences AAF1845 - AAF18433 and clistication and characterisation of the polynucleotide and protein
                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                                                                                                                                        This is the amino acid sequence of a novel neuroblastoma-specific paired-like homeobox protein which is expressed on human glloma cells. The encoding gene was isolated from a 3 directed cDNA library prepared from human neuroblastoma cell line (CFP184. The screen isolated a clone designated GS008886 whose insert contained the coding sequence and the 5' and 3' sequences of the gene (AAT85972-3 respectively). Expression of the gene was detected in neuroblastoma cell lines. Oligonucleotides derived from the sequence of the homeobox gene can be used as probes for diagnosing human gliomas, and in the detection of new tumours.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a rat protein which has brain injuryderivephic peptide (BINP) receptor function (I). (I) has neuroprotective activity. The polynuclectide sequence (II) encoding (I) can be used in gene therapy. The BINP receptor protein can be used for screening for BINP receptor agonists. The agonists are useful as nerve function activators. The present invention also describes the anti-BINP-binding protein monoclonal antibody 6A22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New DNA encoding BINP receptor protein, useful for screening for BINP receptor agonists as nerve function activators \cdot

                                                                                                                                                                                                                                                                                                                                                differentiate into neurons and for NNCs to express a neuronal subtype specific marker. Transformed host cells are used as sources of neuronal and other growth factors; in culture for screening compounds that modulate neural differentiation or as sources of recombinantly produced neurogenins and Phox2a proteins for use in transplantation. The cells also have a variety of in vivo uses; e.g. for transplantation at sites of neuronal dysfunction e.g. patients with hearing or vision loss due to optical or auditory nerve damage, brain or spinal cord injuries, and neurodegenerative disorders e.g. Althelmer's disease. NNCs differentiate into neurons through the recombinant expression of a transcription factor that induces a core program of neurogenesis. The present sequence encodes neurons which express tyrosine hydroxylase (TH), the rate limiting enzyme in the synthesis of catecholamines.
                                                                                                                                                                                                                                                                                                                                                                                  o

These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived
                                                                                                                                                                                                                                                                                                                                       (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed The sequence data for this patent did not format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Prosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapoutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Yokoi H;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      amino acid synthesis; vitamin; saccharide;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      19-JUL-1999;
   ó
from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly 1-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.
                                                                                                                                                                                                                                                                                                                                        Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
